

## Carbon Fiber Composite Grid Shelving

- *Unique carbon composite made of chopped fiber with improved flex strength & interlaminar shear*
- *10mm thick grid pattern shelving holds 90KG vs. the competition's 80KG.*
- *Geometric hole pattern can be customized to any shape & pattern, including stepped profiles*
- *Compatible with other grid systems in the industry so you can mix, match, and replace*
- *Shelves can be flame sprayed with alumina to prevent eutectic contact reactions*

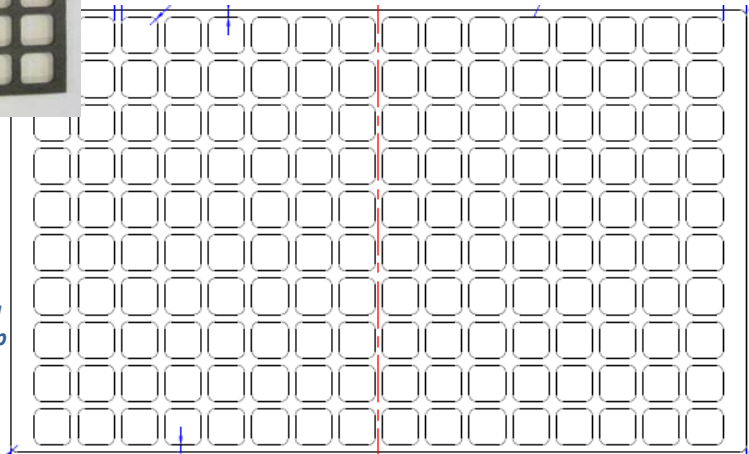

### For shelving quotes:

- Estimate weight, weight distribution of load
- Temperature of use & max temp detailed
- Define length & width needed
- Determine # of shelves wanted, how shelves stack, loading & unloading procedure
- Design hole geometry & pattern
- We then design the shelves & thickness

*Geometric hole pattern can be customized to any shape & pattern including slots & multi-step through holes*
